Expanding Medicaid in Kansas:
Unlocking the Door to Health Insurance for Hispanics

ISSUE BRIEF / MARCH 2015
Kansas has the opportunity to accept federal Medicaid funds and extend much-needed health coverage to more than 142,000 low-income, uninsured adults. Of this population, 17 percent—more than 24,000 people—are Hispanics.¹

Accepting federal Medicaid funds would not only provide more than 24,000 Hispanic Kansans with access to affordable health insurance, it would also be a critical step toward achieving health equity in the state. Compared to non-Hispanic whites, Hispanics nationally have higher rates of several diseases—including diabetes, cervical cancer, and liver disease—all of which can be ameliorated by access to health insurance.²

Working with Dr. Shun Zhang, a biostatistician with the National Center for Primary Care at Morehouse School of Medicine, Families USA examined key measures of health and access to health care from the U.S. Centers for Disease Control and Prevention’s Behavioral Risk Factor Surveillance System (BRFSS 2012). The data set compares access to health care and preventive health services for insured and uninsured low-income Hispanics.

Our analysis provides a valuable picture of the health status of a low-income population that correlates to the Medicaid expansion population. Below are three core indicators of this population’s access to health care.

### Findings from the BRFSS Data

The BRFSS database does not use federal poverty levels; therefore, we defined low-income individuals as any person with an annual income of $35,000 or less. This BRFSS income break approximates 138 percent of the federal poverty level for a family with between four and five people.

Our analysis provides a valuable picture of the health status of a low-income population that correlates to the Medicaid expansion population. Below are three core indicators of this population’s access to health care.

#### Three Core Health Indicators

1. **Could not see a doctor because of cost**
   - Forty-four percent of uninsured, low-income Hispanics reported that they could not see a doctor because of cost, whereas only 35 percent of insured, low-income Hispanics reported the same outcome.

2. **No regular source of care**
   - Eighty percent of uninsured, low-income Hispanics reported that they did not have a regular doctor, whereas only 32 percent of insured, low-income Hispanics reported the same outcome.

3. **No access to a routine check-up**
   - Forty-seven percent of uninsured, low-income Hispanics reported that they had not had a routine check-up in the past year, whereas only 30 percent of insured, low-income Hispanics reported the same outcome.

Families USA 2014
Other Notable Health Care Indicators

Below is one indicator of access to important preventive services.

» No access to a screening mammogram

Forty-five percent of uninsured, low-income, Hispanic women who are more than 40 years old reported that they had not had a mammogram in the past two years, whereas only 11 percent of insured, low-income, Hispanic women who are more than 40 years old reported the same outcome.

Kansas: The Cost of Expanding Medicaid

If Kansas expands Medicaid, the federal government will pay 100 percent of the cost through 2016, 95 percent in 2017, 94 percent in 2018, 93 percent in 2019, and 90 percent of costs in 2020. Kansas will not have to pay more than 10 percent of the cost of providing hundreds of thousands of Kansans with affordable, quality health insurance.

New Jobs

If Kansas expands Medicaid, the influx of new federal dollars will generate new jobs in the health care sector and other economic sectors. If Kansas had expanded Medicaid in January 2014 when the option was first available, the influx of federal dollars would have supported approximately 4,000 jobs in 2016.

Kansas’s Medicaid Expansion Option

The Affordable Care Act gives Kansas and other states the option to provide Medicaid to residents with incomes up to 138 percent of the federal poverty level ($32,913 for a family of four in 2014). Twenty-seven states and the District of Columbia have decided to accept the federal dollars and expand Medicaid to their low-income, uninsured residents. Kansas has not.

To be eligible for Medicaid in Kansas, a family’s income must be no more than 38 percent of poverty ($9,063 annually for a family of four). Kansas does not provide any Medicaid coverage to adults without dependent children.³

NO MAMMOGRAM

Percent of low-income Hispanic women over 40 years old who reported that they had not had a mammogram to screen for breast cancer in the past two years:

- Uninsured: 45%
- Insured: 11%

Expanding Access to Insurance Is Key to Achieving Health Equity

Extensive published research, including recent studies, as well as the 2001 landmark study by the Institute of Medicine,5 have established the correlation between expanding access to health insurance and improving health status. Insurance provides access to doctors, hospitals, other providers, and treatment. Most importantly, people with insurance tend to have a regular doctor available for routine check-ups and to treat health problems as they arise, before they escalate into serious and costly conditions. For many people, early detection and treatment are matters of life and death.

And while we know that an insurance card alone does not end racial or ethnic disparities in health status and treatment, it is clear that expanding the availability of affordable, quality health insurance for Hispanic communities is a necessary first condition for achieving health care equity.

Conclusion

There is no question that Hispanic communities have a significant stake in the Medicaid expansion debate in Kansas. The Medicaid expansion can unlock a door to the health care system for thousands in Hispanic communities across the state. For Kansas, rejecting Medicaid expansion means leaving billions of federal Medicaid dollars on the table. Kansans who care about public health, economic growth, social justice, and health equity should tell their state leaders to move Kansas forward by expanding Medicaid.
