Expanding Medicaid in Virginia: Unlocking the Door to Health Insurance for Hispanics

ISSUE BRIEF / MARCH 2015
Virginia has the opportunity to accept federal Medicaid funds and extend much-needed health coverage to more than 343,000 low-income, uninsured adults. Of this population, 8 percent—more than 26,000 people—are Hispanics.¹

Accepting federal Medicaid funds would not only provide more than 26,000 Hispanic Virginians with access to affordable health insurance, it would also be a critical step toward achieving health equity in the state. Compared to non-Hispanic whites, Hispanics nationally have higher rates of several diseases—including diabetes, cervical cancer, and liver disease—all of which can be ameliorated by access to health insurance.²

Working with Dr. Shun Zhang, a biostatistician with the National Center for Primary Care at Morehouse School of Medicine, Families USA examined key measures of health and access to health care from the U.S. Centers for Disease Control and Prevention’s Behavioral Risk Factor Surveillance System (BRFSS 2012). The data set compares access to health care and preventive health services for insured and uninsured low-income Hispanics.

Our analysis found that uninsured, low-income, Hispanic Virginians were more likely to report not seeing a doctor because of cost; more likely to report not having a regular doctor; and more likely to report missing an annual, routine check-up than their insured counterparts.

### Findings from the BRFSS Data
The BRFSS database does not use federal poverty levels; therefore, we defined low-income individuals as any person with an annual income of $35,000 or less. This BRFSS income break approximates 138 percent of the federal poverty level for a family with between four and five people.

Our analysis provides a valuable picture of the health status of a low-income population that correlates to the Medicaid expansion population. Below are three core indicators of this population’s access to health care.

#### Three Core Health Indicators

<table>
<thead>
<tr>
<th>Condition</th>
<th>Uninsured (%)</th>
<th>Insured (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Could not see a doctor because of cost</td>
<td>58</td>
<td>22</td>
</tr>
<tr>
<td>No regular source of care</td>
<td>65</td>
<td>24</td>
</tr>
<tr>
<td>No access to a routine check-up</td>
<td>53</td>
<td>13</td>
</tr>
</tbody>
</table>

#### CAN’T AFFORD TO SEE A DOCTOR
Percent of low-income Hispanics who reported they could not see a doctor due to cost:
- Uninsured: 58%
- Insured: 22%

#### DO NOT HAVE A REGULAR DOCTOR
Percent of low-income Hispanics who reported they did not have a regular doctor:
- Uninsured: 65%
- Insured: 24%

#### NO ROUTINE CHECK-UP
Percent of low-income Hispanics who reported they had not had a routine check-up in the past year:
- Uninsured: 53%
- Insured: 13%
**Virginia’s Medicaid Expansion Option**

The Affordable Care Act gives Virginia and other states the option to provide Medicaid to residents with incomes up to 138 percent of the federal poverty level ($32,913 for a family of four in 2014). Twenty-seven states and the District of Columbia have decided to accept the federal dollars and expand Medicaid to their low-income, uninsured residents. Virginia has not.

To be eligible for Medicaid in Virginia, a family’s income must be no more than 54 percent of poverty ($12,879 annually for a family of four). Virginia does not provide any Medicaid coverage to adults without dependent children.3

**Expanding Access to Insurance Is Key to Achieving Health Equity**

Extensive published research, including recent studies, as well as the 2001 landmark study by the Institute of Medicine,5 have established the correlation between expanding access to health insurance and improving health status. Insurance provides access to doctors, hospitals, other providers, and treatment. Most importantly, people with insurance tend to have a regular doctor available for routine check-ups and to treat health problems as they arise, before they escalate into serious and costly conditions. For many people, early detection and treatment are matters of life and death.

And while we know that an insurance card alone does not end racial or ethnic disparities in health status and treatment, it is clear that expanding the availability of affordable, quality health insurance for Hispanic communities is a necessary first condition for achieving health care equity.

---

**Virginia: The Cost of Expanding Medicaid**

If Virginia expands Medicaid, the federal government will pay 100 percent of the cost through 2016, 95 percent in 2017, 94 percent in 2018, 93 percent in 2019, and 90 percent of costs in 2020. Virginia will not have to pay more than 10 percent of the cost of providing hundreds of thousands of Virginians with affordable, quality health insurance.

**New Jobs**

If Virginia expands Medicaid, the influx of new federal dollars will generate new jobs in the health care sector and other economic sectors. If Virginia had expanded Medicaid in January 2014 when the option was first available, the influx of federal dollars would have supported approximately 31,000 jobs by 2019.4
Conclusion

There is no question that Hispanic communities have a significant stake in the Medicaid expansion debate in Virginia. The Medicaid expansion can unlock a door to the health care system for thousands in Hispanic communities across the state. For Virginia, rejecting Medicaid expansion means leaving billions of federal Medicaid dollars on the table. Virginians who care about public health, economic growth, social justice, and health equity should tell their state leaders to move Virginia forward by expanding Medicaid.
