South Carolina

Expanding Medicaid in South Carolina: Unlocking the Door to Health Insurance for African Americans

3 CORE HEALTH INDICATORS FOR LOW-INCOME AFRICAN AMERICANS WITH/WITHOUT INSURANCE

South Carolina has the opportunity to accept federal Medicaid funds and extend much-needed health coverage to more than 322,000 low-income, uninsured adults. Of this population, 42 percent—more than 136,000 people—are African Americans.¹

Accepting federal Medicaid funds would not only provide more than 136,000 African American South Carolinians with access to affordable health insurance, it would also be a critical step toward achieving health equity in the state. Compared to non-Hispanic whites, African Americans nationally have higher rates of several diseases—including diabetes, cervical cancer, and breast cancer—all of which can be ameliorated by access to health insurance.²

Working with Dr. Shun Zhang, a biostatistician with the National Center for Primary Care at Morehouse School of Medicine, Families USA examined key measures of health and access to health care from the U.S. Centers for Disease Control and Prevention's Behavioral Risk Factor Surveillance System (BRFSS 2012). The data set compares access to health care and preventive health services for insured and uninsured low-income African Americans.

Our analysis found that uninsured, low-income, African American South Carolinians were more likely to report not seeing a doctor because of cost; more likely to report not having a regular doctor; and more likely to report missing an annual, routine check-up than their insured counterparts.

Findings from the BRFSS Data

The BRFSS database does not use federal poverty levels; therefore, we defined low-income individuals as any person with an annual income of \$35,000 or less. This BRFSS income break approximates 138 percent of the federal poverty level for a family with between four and five people.

Our analysis provides a valuable picture of the health status of a low-income population that correlates to the Medicaid expansion population. Below are three core indicators of this population's access to health care.

Three Core Health Indicators

- \$ **Could not see a doctor because of cost**
 Fifty-four percent of *uninsured*, low-income African Americans reported that they could not see a doctor because of cost, whereas only 23 percent of *insured*, low-income African Americans reported the same outcome.
- 👤 **No regular source of care**
 Fifty-two percent of *uninsured*, low-income African Americans reported that they did not have a regular doctor, whereas only 16 percent of *insured*, low-income African Americans reported the same outcome.
- 🔍 **No access to a routine check-up**
 Fifty-six percent of *uninsured*, low-income African Americans reported that they had not had a routine check-up in the past year, whereas only 26 percent of *insured*, low-income African Americans reported the same outcome.

CAN'T AFFORD TO SEE A DOCTOR

Percent of low-income African Americans who reported they could not see a doctor due to cost:

- **Uninsured: 54%**
- **Insured: 23%**

DO NOT HAVE A REGULAR DOCTOR

Percent of low-income African Americans who reported they did not have a regular doctor:

- **Uninsured: 52%**
- **Insured: 16%**

NO ROUTINE CHECK-UP

Percent of low-income African Americans who reported they had not had a routine check-up in the past year:

- **Uninsured: 56%**
- **Insured: 26%**

Families USA 2014

OTHER HEALTH INDICATORS FOR LOW-INCOME AFRICAN AMERICANS WITH/WITHOUT INSURANCE

NO MAMMOGRAM

Percent of low-income African American women over 40 years old who reported that they had not had a mammogram to screen for breast cancer in the past two years:

- Uninsured: 40%
- Insured: 21%

NO PROSTATE CANCER SCREENING

Percent of low-income African American men over 40 years old who reported that they had not had a prostate-specific antigen (PSA) test to screen for prostate cancer in the past two years:

- Uninsured: 76%
- Insured: 61%

Families USA 2014

Other Notable Health Care Indicators

Below are indicators of access to important preventive services.

- » **No access to a screening mammogram**
Forty percent of *uninsured*, low-income, African American women who are more than 40 years old reported that they had not had a mammogram in the past two years, whereas only 21 percent of *insured*, low-income, African American women who are more than 40 years old reported the same outcome.
- » **No access to a prostate cancer screening**
Seventy-six percent of *uninsured*, low-income, African American men who are more than 40 years old reported that they had not had a prostate-specific antigen (PSA) test to screen for prostate cancer in the past two years, whereas only 61 percent of *insured*, low-income, African American men who are more than 40 years old reported the same outcome.

South Carolina's Medicaid Expansion Option

The Affordable Care Act gives South Carolina and other states the option to provide Medicaid to residents with incomes up to 138 percent of the federal poverty level (\$32,913 for a family of four in 2014). Twenty-seven states and the District of Columbia have decided to accept the federal dollars and expand Medicaid to their low-income, uninsured residents. South Carolina has not.

To be eligible for Medicaid in South Carolina, a family's income must be no more than 67 percent of poverty (\$15,980 annually for a family of four). South Carolina does not provide any Medicaid coverage to adults without dependent children.³

South Carolina: The Cost of Expanding Medicaid

If South Carolina expands Medicaid, the federal government will pay 100 percent of the cost through 2016, 95 percent in 2017, 94 percent in 2018, 93 percent in 2019, and 90 percent of costs in 2020. South Carolina will not have to pay more than 10 percent of the cost of providing hundreds of thousands of South Carolinians with affordable, quality health insurance.

New Jobs

If South Carolina expands Medicaid, the influx of new federal dollars will generate new jobs in the health care sector and other economic sectors. If South Carolina had expanded Medicaid in January 2014 when the option was first available, the influx of federal dollars would have supported approximately 44,000 jobs by 2020.⁴

Expanding Access to Insurance Is Key to Achieving Health Equity

Extensive published research, including recent studies, as well as the 2001 landmark study by the Institute of Medicine,⁵ have established the correlation between expanding access to health insurance and improving health status. Insurance provides access to doctors, hospitals, other providers, and treatment. Most importantly, people with insurance tend to have a regular doctor available for routine check-ups and to treat health problems as they arise, before they escalate into serious and costly conditions. For many people, early detection and treatment are matters of life and death.

And while we know that an insurance card alone does not end racial or ethnic disparities in health status and treatment, it is clear that expanding the availability of affordable, quality health insurance for African American communities is a necessary first condition for achieving health care equity.

Kathleen Stoll, Director of Health Policy, Families USA

Data Consultant: Shun Zhang, National Center for Primary Care, Morehouse School of Medicine

The following Families USA staff contributed to the preparation of this material (listed alphabetically):

Andrea Callow, Medicaid Policy Analyst

Sinsi Hernández-Cancio, Director, Health Equity

Dee Mahan, Medicaid Program Director

Kevin Oshinskie, Health Equity Intern

Evan Potler, Art Director

Carla Uriona, Director of Content Strategy

Ingrid VanTuinen, Director of Editorial

Conclusion

There is no question that African American communities have a significant stake in the Medicaid expansion debate in South Carolina. The Medicaid expansion can unlock a door to the health care system for hundreds of thousands in African American communities across the state. For South Carolina, rejecting Medicaid expansion means leaving billions of federal Medicaid dollars on the table. South Carolinians who care about public health, economic growth, social justice, and health equity should tell their state leaders to move South Carolina forward by expanding Medicaid.

Working but Uninsured

Across the 23 states that have not expanded Medicaid, more than 80 percent of those who stand to gain coverage are either working or not in the workforce. Most—57 percent—are currently working or have worked within the last year. Twenty-four percent are classified as “not in the workforce” and include people with disabilities, students, non-working spouses, and people who have left the workforce.⁶
