

Currently, nearly 20 million people across the United States get help paying for their health coverage through premium tax credits (also known as advance premium tax credits, or APTCs), which they can use to purchase a plan through the health insurance marketplaces. These tax credits are a lifeline for people who would otherwise not be able to afford their health coverage or access health care. But if Congress does not act, this assistance will be cut, and millions of people will face losing their health insurance, delaying or skipping needed health care, or taking on medical debt they cannot afford.

20 NILLION people across the United States get help paying for their health coverage through premium tax credits.

#### **APTCs in America**

Today, people seeking to purchase health insurance may qualify for APTCs if their household income is at least \$14,580 for an individual or \$30,000 for a family of four, they buy a plan offered on healthcare.gov or a state marketplace, and they do not have other options for affordable health coverage.<sup>1</sup> In light of the ongoing U.S. health care affordability crisis, and particularly in the wake of the COVID-19 pandemic, Congress has acted to bolster the amount of assistance available to people in recent years, increasing the premium tax credit amounts under the American Rescue Plan Act and extending those enhancements under the Inflation Reduction Act. These actions have saved individuals and families money in insurance premiums and enabled many to cut their deductibles in half.<sup>2</sup> But those enhancements are set to expire at the end of 2025, leaving many Americans at risk for significant losses.

### **IMPACT ON OHIO FAMILIES**

In 2024, **427,000 Ohioans** receive advance premium tax credits.<sup>3</sup> The average monthly premium cost for marketplace plans is \$581, but after APTCs, the average monthly premium is \$136.\*

- >> The amount that people currently pay for premiums varies by age and income, but premiums for most families and individuals will increase significantly if the enhanced premium tax credits are allowed to expire.<sup>4</sup>
- Single individuals in their mid-40s making \$30,000 would see their premiums increase by \$1,350 per year.
- Couples in their early 6os earning \$80,000 would see their premiums increase by about \$15,371 per year.

\* "2024 Marketplace Open Enrollment." The average monthly premium after APTCs solely among consumers receiving APTCs is even lower — \$81.

# HOW TAX CREDITS HELP REAL PEOPLE: DEAN'S STORY

These tax credits are helping real people, like Dean<sup>5</sup>, a 34-year-old who is a self-employed designer and has had a marketplace plan for the past three years. When he first purchased a plan through the marketplace in 2021, Dean was enrolled in a high-deductible bronze plan, but he was able to switch to a more comprehensive silver plan with more cost-sharing savings after Congress increased premium tax credits. Choosing a more comprehensive plan turned out to be a critical decision because Dean was diagnosed with cancer in 2022 and needed to rely on his plan to cover treatment expenses. He currently has a plan with an affordable monthly premium (around \$80 per month) and a relatively low deductible and out-of-pocket maximum (\$1,000 and \$3,000, respectively). He was grateful to have this plan following his cancer diagnosis because the low out-of-pocket maximum allowed him to receive all of the treatments and specialty medications that he needed to recover from cancer and that he would not have been able to afford with a bronze plan. Dean's cancer is in remission, but he still has regular follow-up and checkup appointments, so the continuation of the enhanced subsidies is essential so he can receive care and stay healthy.

## **CALL TO ACTION**

Families from coast to coast cannot be left wondering if this critical assistance will be available to them the next time they need to renew their health insurance.

# CONGRESS MUST ACT QUICKLY TO PERMANENTLY EXTEND APTC ENHANCEMENTS.
